

ABSTRACT OF THE DISCLOSURE

There is provided an intermediation control apparatus that carries out intermediation control while securing reliability of the system by protection of information. An extraction section (disclosure information-extracting section) determines a range of personal information of a user, for disclosure, based on a kind of request information sent from the user, and extracts the range of personal information from the personal information. A transaction section (disclosure information-extracting section) makes the extracted range of personal information and contents of a request available to the service provider.
